

# Calix Huang

Product Engineer

```
1 // INITIALIZATION
2
3 class Calix {
4   constructor() {
5     this.name = "Calix Huang";
6     this.email = "calix.huang1@gmail.com";
7     this.phone = "(925) 332-6127";
8     this.experience = [];
9     this.skills = [];
10    this.education = [];
11  }
12
13  addExperience({ company, title, startDate, endDate, description }) {
14    this.experience.push({ company, title, startDate, endDate, description
15  });
16  }
17
18  getSkills() {
19    return this.skills;
20  }
21
22  addEducation({ organization, title, description }) {
23    this.education.push({ organization, title, description });
24  }
25 }
26
27 // ADD PREVIOUS EXPERIENCE
28
29 const calix = new Calix();
30
31 calix.addExperience({
32   company: "Captivated",
33   title: "Founder",
34   startDate: "September 2022",
35   endDate: "May 2023",
36   description:
37     "Customer feedback analytics and aggregation. Backed by Y Combinator
38 (W23). Led all product, design, and engineering efforts.",
39 });
40
41 calix.addExperience({
42   company: "Contrary",
43   title: "Venture Partner",
44   startDate: "June 2022",
45   endDate: "April 2023",
46   description:
47     "Meeting founders, scouting talent, and breeding entrepreneurship at USC
48 through Contrary.",
49 });
50
51 calix.addExperience({
52   company: "Kinetic",
53   title: "Software Engineer",
54   startDate: "July 2022",
55   endDate: "August 2022",
56   description:
57     "The future of NFT aggregation. 3rd engineering hire. Worked on product
58 design and frontend implementations.",
59 });
60
61 // ...
```

How do I fetch Calix's skills, and what is the return value?

gpt-3.5 gpt-4

 Working in calixResume.js

Based on the contents in `calix\_resume.js` and the use of the `class` constructor, you can access Calix's skills using the `getSkills()` method.

Here's an example on how to initialize Calix and access his skills.

```
const calix = new Calix();
const calixSkills = calix.getSkills();

// PRINTING OUT EACH SKILL
for (const skill of calix.getSkills()) {
  console.log(skill);
}
```

Here is the output of the code above:

```
Full-Stack Web Development
Product Engineering
Platform Product Design

// ...
```

How do I add Calix's educational history to the class object?

gpt-3.5 gpt-4

 Working in calixResume.js

You can use the `addEducation()` method on the `Calix` class object.

Here's an example on how to initialize Calix and add an educational item.

```
const calix = new Calix();

// ADDING AN ITEM TO EDUCATION
calix.addEducation({
  organization: "USC Iovine & Young
Academy",
  title: "Student",
  description: "Cohort 9 at USC IYA.
Graduation date TBD."
});

// ...
```

Ask anything about this codebase or about Calix!
